DESIGN AREAS

Gameplay Systems Design
Level Design UI/UX
Narrative Design
Sound Design

PRACTICES

SCRUM / Agile Playtesting
Iteration GDD Unit Testing
Pull Requests

LANGUAGES

Swedish (native)
English (fluent)
Farsi (fluent)

SUMMARY

Junior Gameplay Developer and Technical Designer with a shipped Steam game, Murmurs of the Mist (25,000+ copies sold), finishing a degree in Game Design and Scripting at Södertörn University. I build combat systems, editor tools and levels in Unity and C#, with a focus on modular, data-driven architecture and game feel. Before games I led a small group of CAD designers in HVAC engineering, so I am used to delivering on fixed deadlines.

GAME DEVELOPMENT PROJECTS

Murmurs of the Mist 25,000+ SOLD ON STEAM
Unity · C# · Perforce · SCRUM · team of about 10

Level designer and gameplay scripter; the game has sold 25,000+ copies on Steam. Designed and built a full chase level from blockout to release, including the character controller and a dynamic camera system in C#. Paced the level beats to build tension, and set the mood with lighting, post-processing and custom shaders. Added sound design and in-game voice acting, and iterated on playtest feedback.

Pizza to Hell IN DEVELOPMENT
Unity 6 (HDRP) · C# · GitHub · PSX style · 12-person team

Responsible for the data-driven combat and combo architecture: attacks, combos and weapons are ScriptableObjects, connected through a central enum-keyed event bus. Implemented a parry system and enemy AI states that respond to it, with input buffering to keep combos responsive. Built a custom editor tool (visual timeline, hitbox gizmos, weapon authoring) so attacks are tuned without code. Wrote HLSL shaders for the combo streak HUD; shipped features through pull requests on GitHub.

Monopoly
C# · .NET · unit tests

Modular C# implementation with a clean OOP architecture: Board, Players, Managers and AI as separate systems. Full turn pipeline and an AI opponent built with minimax; full unit test coverage.

Streets of Belonging
Unity · C#

Narrative game. Owned the UI systems and emotion and colour triggers mapping five NPC emotional states to colour and light; contributed to the GDD.

Cannoneer
MonoGame · C# · physics simulation

2D artillery game with projectile physics, per-frame gravity for parabolic arcs and multi-ring explosion animation.

PROFESSIONAL EXPERIENCE

Assistant Engineer and Group Leader 2019 – 2026
TQI Consult AB
Produced technical documentation and CAD drawings (MagiCAD) for HVAC and piping projects. Led a group of 4–5 junior and mid-level CAD designers, training them and leading them to delivery on several projects. Coordinated across teams to deliver technical work on fixed deadlines.
